

# Switch to Simpler IPAM

Your Quick Guide to Transitioning to Tidal LightMesh

# LightMesh Migration Checklist

Whether you're moving from Infoblox or SolarWinds, these five steps will guide you through a smooth transition to LightMesh's intuitive IPAM solution.

## Follow These Simple Steps:

### 1. Export Data

- Infoblox:** Export your subnets as a CSV file from the IPAM section
- SolarWinds:** Export subnet data as a CSV following SolarWinds guidelines

### 2. Prepare Your Data

- Ensure your CSV files are accurate and align the columns with LightMesh's required fields\*

\* Visit [guides.lightmesh.com/import/](https://guides.lightmesh.com/import/) for detailed field specifications and example formats.

### 3. Import to LightMesh

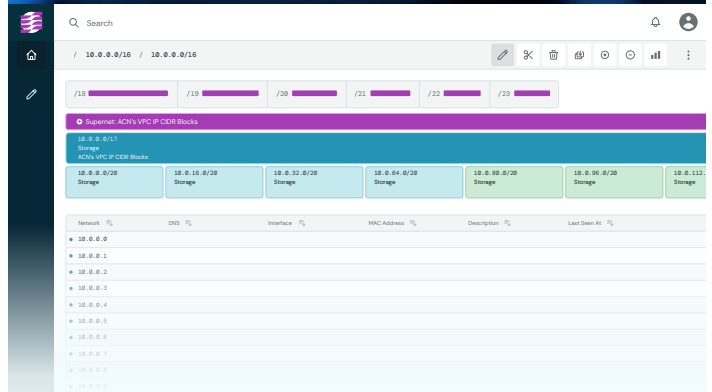

- Log in to LightMesh, go to Settings > Imports, and upload the CSV file

### 4. Verify the Import

- Review the imported data in Network > Subnets and use bulk updates to correct any issues

### 5. Use LightMesh's Features

- Visualize your subnets, plan with real-time updates, and integrate with AWS or Azure
